

SOLVENCY NEED RATIO (THE ICAAP RESULT) AT END-MARCH 2014

The Bank's calculation method and model for calculating the solvency need ratio (the ICAAP result) are unchanged compared with end-December 2013.

Process and methodology for calculating the solvency need ratio

Towards the end of 2012, amendments to the Danish Financial Business Act were adopted, the effect being that the solvency need ratio (the ICAAP result) (the Pillar 2 capital requirement) was redefined so as to serve as an add-on to the 8% requirement. To follow up on the amendments, the Danish Financial Supervisory Authority issued new guidelines specifying the requirements as to an adequate capital base and the solvency need ratio (the ICAAP Result), based on the 8+ method.

The 8+ method is based on the statutory minimum requirement of 8.0% of the risk-weighted items (Pillar 1) plus add-ons for risks and matters not fully reflected in the calculation of risk-weighted items. In other words, ordinary risks are assumed to be covered by the 8% requirement, and, consequently a position has to be taken as to the extent to which an institution has additional risks that necessitate an add-on to the solvency need ratio (the ICAAP result) (Pillar 2).

In the guidelines issued by the Danish Financial Supervisory Authority, benchmarks have been introduced within a number of risk areas determining when the Authority basically finds that Pillar 1 is insufficient, and that an add-on to the solvency need ratio (the ICAAP result) is required. In addition, to the extent possible methods have been introduced for calculating the amount of the add-on within the individual risk areas.

The Bank's calculation method follows the guidelines issued by the Danish Financial Supervisory Authority and is based on an assessment of the Bank's risks within the following seven key areas, of which the first six are directly addressed in the guidelines:

1. Earnings
2. Lending growth
3. Credit risks
4. Market risks
5. Liquidity risks
6. Operational risks
7. Other risks

The impact of the individual areas on the capital need has been calculated directly using the methods designated by the Danish Financial Supervisory Authority in its guidelines, and by making supplementary calculations. Management has made an estimate in a few risk areas.

In the Bank's opinion, the risk factors included in the model cover all the risk areas required by legislation to be taken into consideration by Management in determining the solvency need and the risks that the Management finds the Bank has assumed.

Solvency need (ICAAP result)

The sufficient own funds at end-March 2014 has been calculated at DKK 4,333 million, and are thus DKK 67 million higher than in the statement at end-December 2013.

The Group's total risk exposure rose from DKK 42.7 billion at end-December 2013 to DKK 44.7 billion at end-March 2014, and the solvency need calculated in per cent dropped from 10.0% to 9.7%.

SOLVENCY NEED RATIO BROKEN DOWN BY RISK AREA, END-MARCH 2014

| Risk area | The Group | The Group | Parent Comp. | Parent Comp. |
|--------------------------------|----------------------------|-----------------|----------------------------|-----------------|
| | Sufficient own funds DKK m | Solvency need % | Sufficient own funds DKK m | Solvency need % |
| Credit risks | 3,301 | 7.4 | 3,370 | 7.5 |
| Market risks | 575 | 1.3 | 577 | 1.3 |
| Operational risks | 457 | 1.0 | 408 | 0.9 |
| Other risks | 0 | 0.0 | 0 | 0.0 |
| Any add-on, if required by law | 0 | 0.0 | 0 | 0.0 |
| Total | 4,333 | 9.7 | 4,355 | 9.7 |

Excess coverage relative to the statutory requirement and internal capital targets

At end-March 2014, the Group's total capital ratio stood at 19.4%, corresponding to an excess coverage of 9.7 percentage points relative to the solvency need ratio.

Thus, the excess coverage rose relative to end-December 2013, when the excess coverage was calculated at 9.4 percentage points.

EXCESS CAPITAL COVERAGE RELATIVE TO THE STATUTORY REQUIREMENT, END-MARCH 2014

| | The Group | Parent Company |
|-------------------------------------|-----------|----------------|
| Own funds (DKK m) | 8,672 | 8,687 |
| Sufficient own funds (DKK m) | 4,333 | 4,355 |
| Excess coverage (DKK m) | 4,339 | 4,332 |
| Capital (%) | 19.4 | 19.3 |
| Solvency need ratio (%) | 9.7 | 9.7 |
| Excess coverage (percentage points) | 9.7 | 9.6 |

The internal capital targets are that the total capital ratio must at least be 3.0 percentage points above the solvency need ratio (the ICAAP result). Given the excess coverage of 9.7 percentage points at end-March 2014, the Bank's excess coverage is thus comfortably above the target.

Measured in amounts, the Bank had an excess capital coverage of DKK 4.3 billion at end-March 2014.
